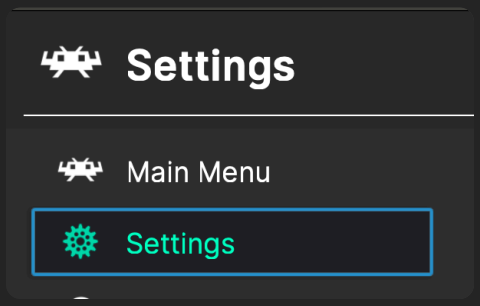
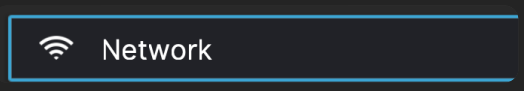
RetroArch Setup (QUSB2SNES)

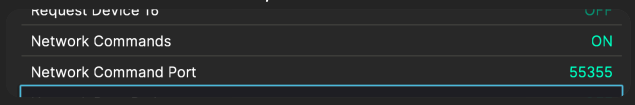
1. First setup the network.



2. Select Network



3. Scroll to the bottom, and set the Network Commands to ON

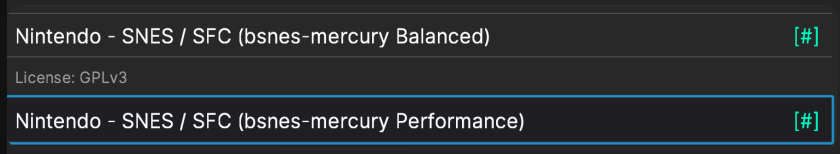


4. Install the SNES9x Core

   a. Navigate to the Main Menu, and Select Load Core

   b. Select Download a Core

   c. Search for SNES and look for the “bsnes-mercury Balanced” or “bsnes-mercury Performance” Core

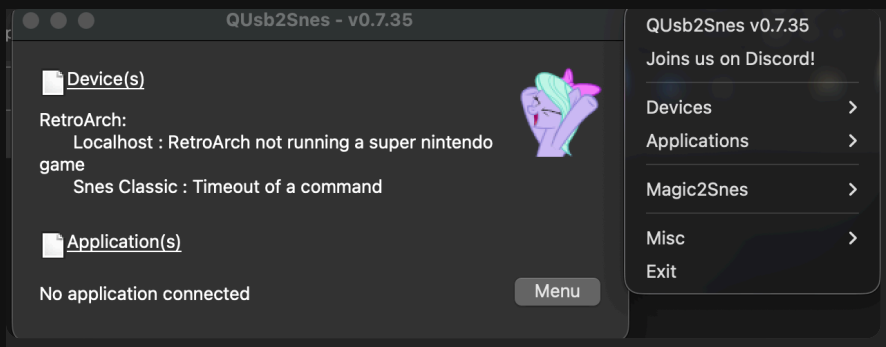


NOTE: SNES9x Core will work, but it is depreciated.

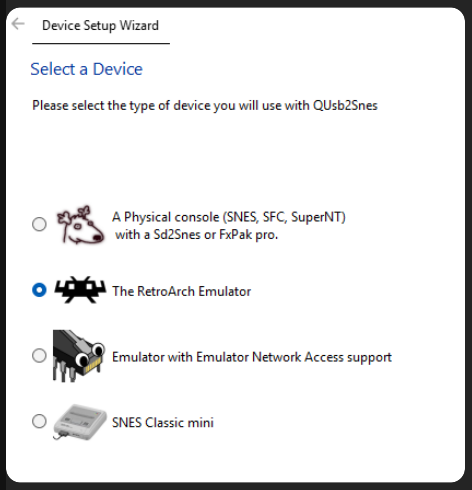
QUSB2SNES

Install QUSB2NES as per https://skarsnik.github.io/QUsb2snes/

Windows may require Microsoft Visual C++ redistributable from Microsoft.



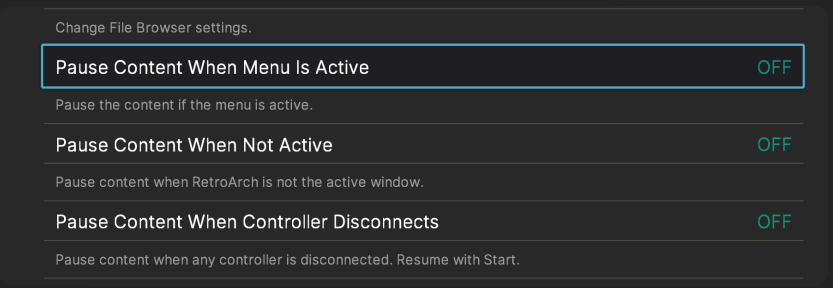
Windows will look like this when launched Select RetroArch:



Tips

Launch RetroArch first, then open QUSB2SNES

- Retroarch pausing may affect the timer functions.
  - To correct
    - In Settings under User Interface and turn off the pause content settings as shown below.

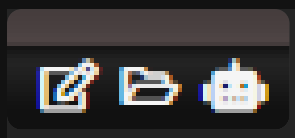


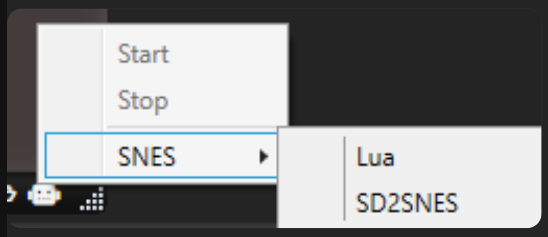
Trackers

MacOS and Windows custom tracker is available https://github.com/hutchch/ALTTPR-Tracker/releases

MacOS and Windows can use the ALTTPR Tracker https://alttprtracker.mfns.dev/

Windows EmoTracker setup





Select the robot looking icon, and select SNES and choose the SD2SNES
